THE ULTIMATE LUXURY BEACH ONBOARD

With inspiration deriving from the earth's elements, as well as from innovative inventors of yesteryear, the design for megayacht Sveti reaches towards ambitious new boundaries.

Italian design studio, Pastrovich has unveiled what they deem "a combination of the most exclusive features of the world's most luxurious resorts...making the ultimate luxury beach onboard experience."

A spectrum of design specifications and structures includes an efficient hull design, energy saving technologies, with natural ecosystems replicated aboard the boundary breaking vessel, which will feature tropical beach elements, guest villas, an underwater spa, and a cave-like lower level housing a wine cellar and cigar lounge. The MY Sveti concept is a luxury resort in motion, with a beach club, observation lounge, infinity pool, and four diverse dining concepts all aboard .

"In the beginning, the inspiration was to find the courage, to hit the first sketch on clean, white paper, which suddenly becomes alive," said architect and designer, Stefano Pastrovich, describing the project."I was always surrounded by the elements. I was born in a town by the sea so my energy is fed by the wind, sea, and sand."

In emulating these natural elements, MY Sveti will feature under floor heating throughout, to radiate the warmth generated when strolling on the beach. The architectural aim is to build stronger ties between nature and humanity. "As we advance as a race it is fundamental to keep a firm connection with the natural environment," said Pastrovich. "In the beginning, all yachts are the same shell. Every yacht is like a wedding cake. It is hard to find something new in this market. I don't just modify a ship slightly, I experiment and transform through an abstract vision in order to discover moderations to create something different."

Natural ecosystems and energy saving technologies will persistently prevail aboard MY Sveti. A contemporary solar panel roof will support a controlled environment. This will be achieved by incorporating two concepts: closing the roof, but keeping a light structure using Bris Soleil, a manually controlled biosphere fused with a visionary concept based on the folding fin of a fish. Liquefied natural gas, a dual fuel system, natural ventilation and lighting all combine to ensure the enormous craft is as energy efficient as possible. Engineers are working to construct an "egg-shaped" hull to reduce load-bearing weight, therefore minimising pollution, as well as reducing the materials necessary for construction.

MY Sveti's guests will have access to jet skis, fishing boats, motorcycles, and the incredible vessel will also provide helicopter transportation. Pastrovich envisages Sveti to be enjoyed en masse, in a communal spirit. "It can be a consuming and costly business maintaining a yacht," he said. "Sveti will provide a luxurious travel experience without the hassle. Just turn up, and enjoy."

Pastrovich considered making one yacht for a private owner, but envisages a fleet of three in Europe, Asia and the Caribbean, with a commonwealth of cruisers maximising the sociable design of Sveti to its full potential.

Stefano Pastrovich is currently seeking a team to collaborate on how best to take MY Sveti from the sketchbook to the sea.

Design Specifications

LOA: 150m
BEAM: 50m
Engines: Dual Fuel System
Passengers: 120
Crew: 120
Accomodation:
- 24 x Standard rooms with private rounded terrace (Hull)
- 24 x VIP rooms with private terrace (Superstructure)
- 12 x VIP Suites with private lounge and terrace (Superstructure)
