Wärtsilä and Pastrovich Studio signed the agreement for the development of hybrid and sustainable boats

signed by the architect and designer Stefano Pastrovich eponymous Pastrovich Studio, an agreement for the development of a cruise ship that focuses on sustainable hybrid technology and ultra-luxury.

These ships will mark a turning point in the experience of the passengers as in construction techniques, whose main objective is the protection of the environment: the design will present a fully integrated combination of hybrid and solar panels, with a minimum environmental impact and high energy efficiency.

The draft of the ship in question is built around the model of a catamaran 60 meters long, with an accommodation for a maximum of 36 passengers, in order to allow also the input ports in otherwise forbidden to large vessels.

“The efficiency and environmental performance are key pillars approach Smart Marine Wärtsilä” said Giammario Meloni, Senior Sales Manager of Wärtsilä Italy “This project includes all these ambitions and we look forward to co-develop with Stefano Pastrovich a totally integrated solution that combines energy efficiency, sustainability and comfort on board. ”

“Wärtsilä is the ideal partner,” explained Stefano Pastrovich. The company and the architect share a common vision, the excellence, pioneering and innovation.
